---

### **PROTECT YOUR VALUABLE CARGO AGAINST MOISTURE**

**DAMAGE**  
TMC moisture absorbers can be used for the following type of

cargo:  
◆◆◆◆◆ Agricultural products like cocoa and coffee beans, tea, rice, flour etc.  
◆◆◆◆◆ Canned goods  
◆◆◆◆◆ Chemicals  
◆◆◆◆◆ Electronic goods  
◆◆◆◆◆ Leather and textile goods  
◆◆◆◆◆ Metal and metal products  
◆◆◆◆◆ Paper and paper products  
◆◆◆◆◆ Wood and wooden products

### **HOW CAN MOISTURE DAMAGE YOUR**

**GOODS?**  
When goods are transported by sea, air or road from especially warm and humid climates to cooler climates, condensation will then occur with water droplets, mould and even fungus, simply because warm air holds more moisture than cooler air. Aside from this, products and packing material like wooden pallets can also contain moisture that dissipates en route. Excessive moisture can seriously damage goods.

### **OUR**

**SOLUTION**  
TMC offers you the best solution to protect your cargo through superior moisture absorbing poles, bags, sacs and sachets filled with calcium chloride granules. Calcium Chloride is a natural product that is well known for its outstanding

hygroscopic properties.  
TMC moisture absorbers come in the following range of products:  
◆◆◆◆◆ TMC pole 1000 gram  
◆◆◆◆◆ TMC sac 1000 gram  
◆◆◆◆◆ TMC bag 1000 gram  
◆◆◆◆◆ TMC sachets with 5 or 10 gram

**HOW IT WORKS**  
TMC moisture absorbers will absorb 200% of its own weight and therefore are the best in its class. The outer bag is made of a one-way, spun-bound Tyvek material that will only allow moisture to travel in. The calcium chloride then turns to gel during the absorption process, which guarantees no leaks of the collected

moisture.
